

# SSInverter High performance engineering vector

## SSI1000

200V(Three-phase Power supply) 0.4~5.5KW  
200V(Single-phase Power supply) 0.4~1.5KW  
400V(Three-phase Power supply) 0.75~355KW

POWERFUL PRECISION HIGH PERFORMANCE

# SSInverter A new generation of the main model **SSI1000**

Superior motor drive performance

Changes in mechanical industry  
the strongest performance level

Powerful software function

Abundant hardware  
configuration

**BLOWER**

**Water pump**

**Winding**

**Air-conditioning**

**Transmission**

**Machine tool**

**Fan**

**Water pump**

**Machine tool**

## Advanced drive function

### Advantest<sup>motor</sup> drive technology

#### All motor control come true

Both drive induction motor or synchronous motor (IPM motor, /SPM motor ) can achieve high performance current vector Control.

Induction motor and synchronus motor can be used the same time with inverter

Through setting Parameters,switching of induction motor and synchronous motor

#### The flexible analog input/output

AI1-AI3 can be used as DI;

AO can be corrected or on-site calibration curve and gain,after correction precision can up to 20mV;

AI1-AI3 can be corrected or on -site calibration curve,after the correction precision of 20mA;

Each analog input (AI1~AI3) , respectively for 4 points of the curve,more flaxible when using

### STABLE RUNNING

Compared with the previus products,reduced the torque ripple, achieve a more stable operation

Torque ripple comparison (with PG vector control in zero speed)

## Swift variety

Sensor-less vector control, torque variety < 20ms

## Rapid current-limiting process

Fast current limiting function can avoid frequency over-current alarm of the inverter.

When the current exceeds the current protection, fast current limiting function can limit the current under the protection point fastly, so as to protect the equipment safety, avoid the over-current alarm caused by sudden added load or disturbance.

## The function of simple PLC

The function of simple PLC, can finish simple combination running of multiple section instruction

## Advanced drive function

### Advantest drive drive technology

All motor control come true

Both drive induction motor or synchronous motor(IPM motor, SPM motor)can control to achieve high performance current vector.

Induction motor and synchronous motor can be used the same time with inverter

Through setting Parameters,switching of induction motor and synchronus motor

### The flexible analog input/output

AI1-AI3 can be used as DI

AO can be corrected or on-site calibration curve and gain, after correction precision can up to 20mV

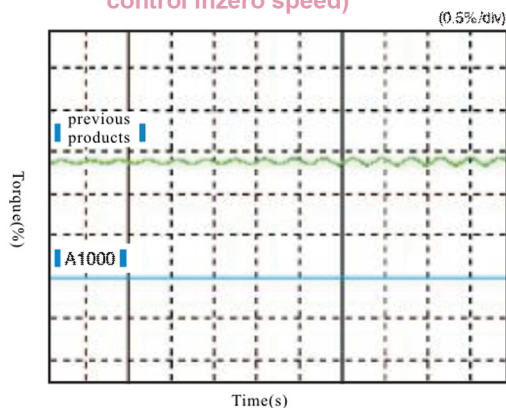

AI1-AI3 can be corrected on-site calibration curve,after the correction precision of 20m A

Each analog input (AI1~AI3) ,respectively for 4 points of the curve, more flexible when using

### STABLE RUNNING

Compared with the previus products,reduced the torque ripple, achieve a more stable operation

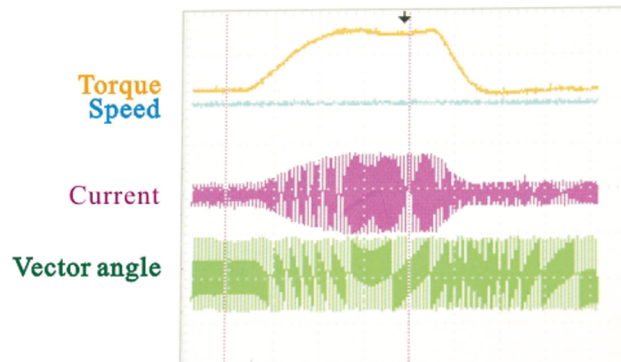

Torque ripple comparison (with PG vector control in zero speed)

## Trait SSI1000

### Swift variety

Non-sense vector control, torque variety < 20ms

### Rapid current-limiting process

Fast current limiting function can avoid the frequency changer frequently appear over-current alarm. When the current exceeds the current protection, fast current limiting function can be fast current limiting current protection, so as to protect the equipment safety, avoid the sudden load or disturbance caused by the current alarm.

### The function of simple PLC

The function of simple PLC, can finish simple combination running of multiple section instruction

## Trait

### A new generation of the main model

#### Provide support for Multi-motor vector control

Support for three-phase AC asynchronous motor, three-phase AC vector control of synchronous motor support for permanent magnet synchronous motor vector control without absolute position feedback supports a variety of encoder

Continuous performance under load and power fluctuations, or even under momentary power interruption

With perfect stall prevention function, motor stall can be prevented effectively. without speed sensor can make the motor running state freely and Motor start easily, speed the search function and transient keep running function, can prevent the inverter from transient abnormal trip

#### The superior torque characteristics

Standard with the current vector control which is the level of the first. High starting is achieved 150% /0.5Hz, can also limit torque. In order to maximize the capacity of the motor, is also equipped with a self learning function.

## SSInverter

A new generation of the main model

### Provide support for Multi-motor vector control

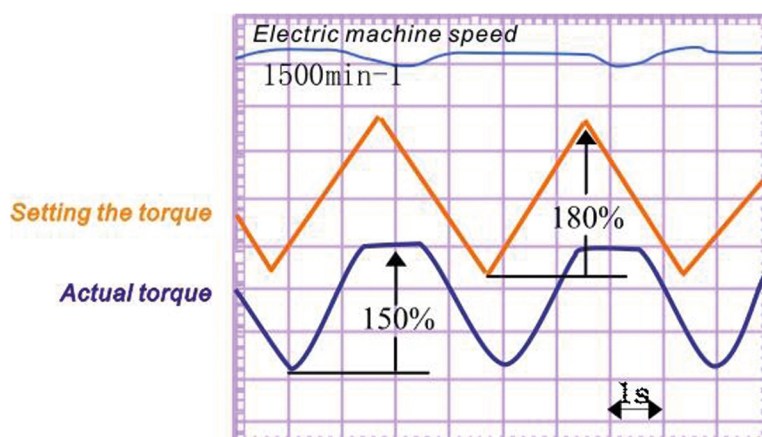

Support for three-phase AC vector control of synchronous motor  
three-phase AC vector control of synchronous motor support for permanent magnet synchronous motor vector control without absolute position feedback supports a variety of encoder

### The superior torque characteristic

### Torque limitatin of protecting machine

Providing torque limitation,when torque command more than than maximum torque machinery can bear, inverter can be more properly premise equipment safety protection torque limit play mechanical maximum efficiency within the set of maximum torque.

## Many communication purchase card

- Standard with RS-485 communication function
- Installation of communication purchancial purchase card,can be used for
- PROFIBUS-DP,CANOPEN.
- Save wiring and space,mechanical disign,installatin,
- maintenance is convenient

## Above 55kW standard DC reactor

Improve the power factor of input side  
To improve the inverter efficiency and thermal stability  
Eliminate theinfluence of higher harmonicsinput side to  
the the invertereffectively,reduce the external conduction  
and radiation interference

## Environmental disign

- With three-paint treatment process about dust-proof,  
moisture-proof,anti-mildew
- Design of wide voltage range
- The whole series of independent design

## Perfect protection function

High accuracy current detection, can finish protecting function precisely and swiftly, complete overload protection (OL/OL1/OL2), over voltage/current stall prevent functional, short circuit to ground protection, abnormal reset, momentary outages tracking function, improve the operation continuity.

## Environmental protection performance

Using SPW way, not only can suppress electromagnetic interference, also can reduce noise.

## Restore user parameters

When debugging or misoperation resulting parameter confusing, can choose to restore default parameters, can also restore parameters that user conserve before, hard to cause the parameters of chaos

## Ultra low noise

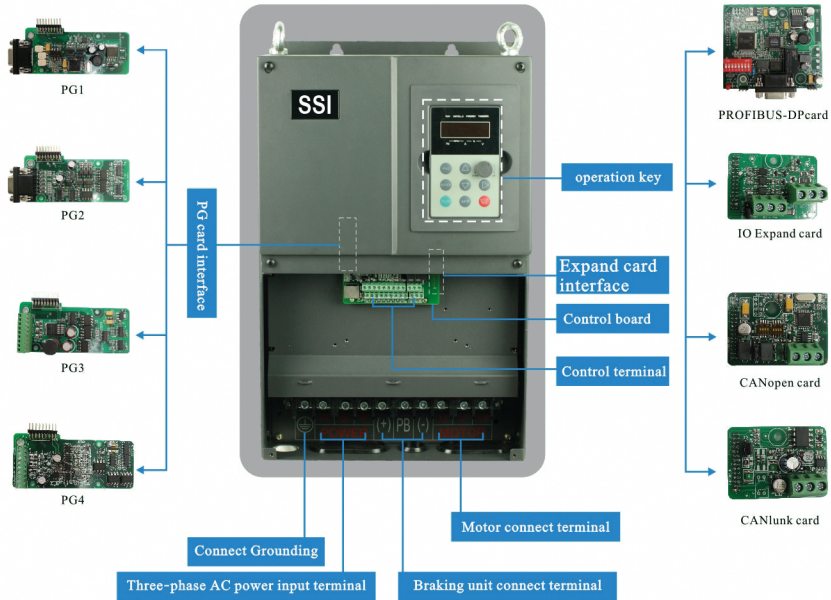

Overload frequency 1KHz~16KHz

# SSI1000

### DIAGRAM OF THREE-PHASE INVERTER WIRING:

Three-phase inverter wiring schematic

**Note:**

1. Terminal  $\odot$  means main circuit terminal,  $\circ$  means control circuit terminal
2. Braking resistor according to the needs of users, detail see the braking resistor selection guide.

## Terminal wiring diagram

### Main circuit terminal marking instructions

Purpose	Terminal	Type I1000
Main circuit power input	R,S,T	0.4Kw~355Kw
Inverter output	U,V,,W	0.4Kw~355Kw
Braking resistor wiring	B1,B2(PB,+)	0.4Kw~30Kw
DC reactor wiring	P1, ⊕	132Kw~355Kw
Braking wiring	⊕, ⊖	18.5Kw~355Kw
Grounding	⊕	0.4Kw~355Kw

### Control terminal marking instructions

+10V	AI1	AI2	AI3	DI1	DI2	DI3	DI4	DI6	COM	T/A2	T/B2	T/C2
485+	485-	GND	GND	CME	DO1	FM	+24V	EV		T/A1	T/B1	T/C1

### Control terminal marking instructions

Type	Terminal mark	Terminal name	Function instructions
Power	+10V-GND	External power supply +10V	The external power+10V,the maximum output current:10mA,generally used for external potentiometer power,potentiometer resistance range:1KΩ ~5KΩ
	+24V+COM	External power supply +24V	The external power+24,Generally using for inputting and outputting terminals working power & External sensor power maximum output power:200mA
	EV	External power input terminal	Default connecting with+24 ,when using external voltage signal drive DI1~DI5, Evneed to connect wit external power, also unpin the connector EV and +24.
Analog input	AI1-GND	Analog input terminals 1	1.Input voltage range:DC0V~10V 2.input impedance;22kΩ
	AI2-GND	Analog input terminals 2	1. Input range:DC0+10v/4Ma~20Ma,control board J8 jumper selection 2. input impedance:input voltage,22K Ω input current500Ω
Digital input	DI1 DI2 DI3 DI4	Digital input 1 Digital input 2 Digital input 3 Digital input 4	1.Optocoupler isolation,Compatible bipolar input 2.Input impedance 2.4K Ω 3.voltage range when inputting electrical level:9V~30V
	DI5	High-speed pulse input terminal	naddition to a DI1~DI4 function ,can also be used as a high-speed pulse input,the maximum input frequency:100KHz
Analog output	AO1-GND	Digital output terminal 1	Selected by the control board J5 jumpers, output voltage range:0V~10V; output current range:0mA~20mA
Digital output	DO1-CME	Digital output 1	Optocoupler isolation bipolar open-collector outputs output voltage range:0V~24V output current range:0mA~50mA
	FM-CME	High pulse output	By the restrict of function code P5-00'' FM terminal output style choice.as the high speed pulse output,the highest frequency to 50KHz; when used as open-collector output and same to DO1 function
Relay output	T/A1-T/C1	Normally open terminal	Contact driving ability: AC250V, 3A COSφ=0.4 DC 30V, 1A
	T/B1-T/C1	Normally closed terminal	
	T/A2-T/C2	Normally open terminal	Contact driving ability: AC250V, 3A COSφ=0.4 DC 30V, 1A
	T/B2-T/C2	Normally closed terminal

## Product assurance

### Warranty

Solemn promise:

Starting from the date of the users to purchase the products of our company (vendor), Customer can enjoy the following after sale service:

1. Starting from the date of the users to purchase the products of our company, customer can enjoy one year of free equipment warranty(except exports sold abroad and nonstandad product)
2. Starting from the date of the users to purchase the products of our company, if any quality problems in one months, we promise returned or replacement,repair Kits
3. Starting from the date of the users to purchase the products of our company, if any quality problems in three months,we promise replacement,repair Kits
4. Starting from the date of the users to purchase the products of our company,customer can enjoy a pay-needed maintenance service for life
5. Escape clause:product failures due to the following causes are of range of free equipment warranty (one year):
  - 1) The breakdown caused by the manipulation that has not follow the request of product manual
  - 2) Failures caused by repair the product and modify the product without authorization
  - 3) Failures caused by using beyond the stand range
  - 4) Failures cause by bad environment conditions
  - 5) Failures caused by earthquake,fire hazard,lightning stroke,other natural disasters.
  - 6) Failures damaged in the course of transportation(transportation selection by the customer,our company can provide the service of transportation)
6. In the following situations,our company have the right to provide support services:
  - 1) The trademark damaged or cannot be recognized
  - 2) Failed to meet the payment requirement
  - 3) Failures caused by repair the product and modify the product without authorization

### Beyond the Line of Duty

Because of the fault of the company`s products, bring your company or the customer of your company the opporaturity loss,  
and the damage cause by your company `s products, whether in the guarantee period, are not belong to scope of the guarantee.
